

BOATIES:

Arrive with a clean hull,
anchor and chain

Exotic caulerpa
– check your
gear and anchor

Mediterranean fanworm – keep
your hull clean

Clubbed tunicate – keep
your hull clean

Northland RC

**PROTECT OUR
PARADISE**

Stop the spread of marine pests

Don't take a nasty hitchhiker with you

Several invasive marine species get spread when boaties accidentally shift them. We know this from spread patterns.

DO IT FOR THE TEAM

Invasive species cause harm when they get established somewhere new. We all need to do our bit to stop spread and protect our boating paradise.

CLEAN YOUR HULL, GEAR AND ANCHOR

The three types of marine biosecurity cleaning for boaties are:

- **ALL BOATS** – check and clean off gear and anchor before you move during a trip
- **TRAILER BOATS** – clean when you get home
- **MOORED BOATS** – keep your hull clean and maintain antifouling.
